# AutoReturn by DRAPER

**Introducing an important new improvement in spring roller design.**
Now available as an optional upgrade on selected models of Draper wall- and ceiling-mounted screens, the AutoReturn spring roller includes a built-in inertia reduction mechanism. With AutoReturn the screen unrolls in the conventional manner, then slowly and gently retracts to the closed position on its own after a simple tug on the handle.

## *Features*

- Viewing surface pulls down easily, like a standard spring roller operated projection screen.
- Return the screen to the case with a simple pull—no repetitive tugging or downward momentum is required to engage the AutoReturn Roller.
- Screen surface retracts slowly and smoothly into the case, slowing even more as it approaches its upper limit.
- Intermediate stop positions allow you to lower or raise the screen completely, or stop at any point in between.
- Prevents potential damage to the dowel or screen surface through repeated impact with the case.
- Cost-effective solution.
- Available in all existing sizes and fabrics for each model of projection screen shown below.
- Patent Pending

## *Models*

AutoReturn is available on these models of Draper Manual Projection Screens:

**Salara/Series M**
**Silhouette/Series M**
**Access/Series M**
**Luma 2**
**Luma**
